Smart night mode

Thanks to the automatic night mode, Neno Vedo Cream automatically adjusts the image to the prevailing lighting conditions. Even in complete darkness, the device provides a clear and sharp image, allowing to keep an eye on your little one without having to enter the room and disturbing their sleep.

Large screen for greater comfort

The built-in 5-inch display allows you to conveniently monitor the situation in your child's room. The image is large and clear enough that you can see at a glance that everything is fine.

Long range

The device has a range of up to 50 metres indoors and up to 300 metres outdoors. This allows you to move freely around your house and garden without losing touch with what is happening in your child's room.

4x zoom

If you would like to take closer look at the details, just click once. With 4x zoom, you can see every gesture, movement or smile of your child – even when you are in another room.

VOX standby mode

VOX standby mode means that the screen only turns on in response to sound. As soon as it hears crying or other sounds, the screen automatically activates. An additional light indicator informs you of noise even when the sound is muted – quiet and effective support for everyday use.

Colored backlighting indicates detected sound

Rotating head

The camera rotates 65° vertically and 355° horizontally. The viewing angle is controlled from the receiver and it's very intuitive, allowing you to observe the entire room – regardless of where your child is.

6 pre-loaded lullabies + white noise

The device has six soothing melodies and a white noise option. These are proven sounds that help children fall asleep faster and sleep longer – ideal for both naps and evening relaxation.

Temperature sensor

The built-in sensor constantly monitors the temperature in your child's room. This ensures that your little one is in appropriate conditions – regardless of the time of day or year.

Alarm function

Neno Vedo Cream allows you to set reminders to help you maintain your daily routine – from feeding and naps to evening rituals. This feature is designed with parents' comfort in mind.

Two-way communication

Thanks to the two-way communication feature, you can speak to your child without having to physically enter their room. This is ideal option when you would like to reassure your little one or let them know you are close by.

Soft light

The subtle lighting emitted by Neno Vedo Cream can serve as a night light. It is gentle enough not to disturb your child's sleep, while allowing you to safely entering the room or changing your baby.

Always in its place

The baby monitor can be placed on a piece of furniture, attached to the wall or hung in a convenient place. Thanks to flexible handle, you can easily adjust the position of the device to suit your interior and your needs.

Choose your colour

Neno Vedo is available in two elegant colours: cream (Neno Vedo Cream) and muted blue (Neno Vedo Blue). Both shades blend perfectly with the design of children's rooms and modern interiors, providing not only functionality but also aesthetics.

An additional view

If you would like to monitor more than one child or two rooms at the same time, you can connect an additional camera. Neno Vedo Cream supports viewing from two sources at the same time. To take full advantage of this feature, we recommend purchasing a second Neno Vedo camera.
